

Weekly Report

General Information

- **Group ID:** Group 12
- **Group Name:** SoloLevelling
- **Project Name:** T06 — API & Contract Testing
- **Date range:** 2026-06-29 – 2026-07-04

Tasks Completed This Week

23127390 - Huỳnh Đăng Khoa

- Studied the Seminar Track workflow and the T06 topic brief; identified the S1–S8 stages, deliverables, and the seminar rubric.
- Surveyed candidate API- and contract-testing tools across licence cost, learning curve, EShop fit, AI capability, and community.
- Selected the toolset for T06, each best-fit in its own category:
- Apidog (manual mode) for traditional API testing.
- Apidog AI for AI test generation from the OpenAPI spec.
- Pact for consumer-driven contract testing and CI/CD-oriented.
- Wrote and finalized the S1 Tool Survey & Proposal.

AI Usage Declaration

Prepared per the course AI Usage Guidelines (Section 5, Option B). AI was used only for permitted purposes: knowledge lookup, and suggesting report/proposal structure and wording (Guidelines §4.1 and §4.3). No analysis, results, or complete report was auto-generated; all output was reviewed, edited, and validated by the student.

Tool:

- Claude (Anthropic), model Claude Opus 4.8, platform claude.ai

Access time and purpose:

- 2026-05-31: Tool selection preparation before the meeting
- 2026-07-04: Report preparation for submission

Evidence (chat history / screenshots): Exported screenshots of the AI chat history, included in this submission as `evidence/1.png` – `evidence/8.png`. Each row below cites the screenshot(s) that support it.

#	Prompt (summarized)	Purpose	What AI generated	What the student did independently / how validated	Evidence
1	"Explain in detail what my team must do during the T06 seminar" (with the guide + brief attached)	Understand the seminar workflow and T06 scope	A summary of the S1–S8 stages and deliverables	Read the original guide and brief to confirm each point; used AI only to orient, not as the source	Evidence/1.png
2	"Suggest tool combinations for T06," "I want different choices," "proceed with Apidog," plus my solo-team constraints	Brainstorm and choose the toolset	A list of candidate tools with trade-offs, and a draft proposal built around Apidog	Made the final tool decision myself — Apidog (manual) + Apidog AI + Pact, no separate backup; verified cost/feature claims against the tools' official docs	Evidence/2.png , Evidence/3.png , Evidence/4.png
3	"Focus on responses for the demo; create detailed comparisons against each tool and prepare defenses (why this tool / why this combination)"	Prepare tool comparisons and oral-defense answers (§4.1)	Draft comparison points and defense talking points	Reviewed and rephrased in my own words; kept only claims I could verify against primary sources	Evidence/5.png
4	"I need to do a weekly report [requirements link]," "here are the total requirements," and formatting the AI Usage Notes appendix	Prepare and format this weekly report (§4.3)	Draft report structure and the AI Usage Notes appendix format	Supplied the real content and dates, edited the wording, and validated the format against the course AI Usage Guidelines	Evidence/6.png , Evidence/7.png , Evidence/8.png , Evidence/9.png

Tasks Planned for Next Week

- Make proper planning for the later weeks.
- Prepare EShop's OpenAPI specification and import it into Apidog.
- Hand-build the core API flow in Apidog with chained-token authentication and manual assertions.
- Generate a test suite from the same spec with Apidog's AI; begin the hand-built-vs-AI diff.
- Look for another project to use this setup on for the demo purpose.

Issues

- **Solo group capacity.** With one member, the workload of an 8-stage seminar is a risk but temporarily addressed by deliberately choosing a low-setup stack. Also, due to urgent deadlines that I've had during the past few weeks, no major progress was made for this seminar; the only deliverable for this weekly report is the tool selection which I've done before the three-week break.
- **Lack of preparation and planning.** No proper tasks planning is yet to develop. Therefore, it's of the highest priority thing for me to do for the next week.
